Paragraph [0003] at Page 1 lines 14-16

In WO-A-01/35790 U.S. Patent No. 6,796,431 there is described a cosmetics package capable of carrying a plurality of different cosmetics products.

Paragraph [0027] at Page 5, lines 17- 37

In WO-A-01/35790 U.S. Patent No. 6,796,431 there is described a cosmetics container consisting of a base unit and a lid hinged thereto. The base unit of the cosmetics container has side walls with cavities therein for receiving cosmetics products which can be removably stored in the cavities. The upper part of the base unit has a plurality of further cosmetics products, such as cakes of powdered material, e.g. eyeshadows, highlighters, concealers, blushers and/or face powder, and applicators, e.g. brushes, which are closed to access when the lid is closed. The cosmetics compact 6 shown in Fig. 2 of the present application, created by mounting the top unit 4 on the base unit 2, is similar in many respects to the cosmetics container shown in WO-A-01/35790 U.S. Patent No. 6,796,431 (the entire contents of which are incorporated herein by way of reference) although, of course, in WO-A-01/35790 U.S. Patent No. 6,796,431 the base unit is a single unit and is not formed of detachable units 2 and 4. The preferred method of releasably retaining the cosmetics products 18a-f in the cavities 17a-f is the same as that described in WO-A-01/35790 U.S. Patent No. 6,796,431 and will not be described in detail herein. However other retention means may be employed if desired.

Paragraph [0038]

at Page 9 lines 6-16.

4) A user can hold the apparatus in one hand and, with the other hand, remove and immediately use any stored cosmetics product without the need to remove a removable cap or lid from the removed cosmetics product and temporarily store it. At least some of the cosmetics products have exposed, uncapped "sticks" of cosmetics material. The walls of cavities in which these cosmetics products are stored themselves provide "caps" or "tops" for the products. On removal of such a cosmetics product from its cavity the exposed end of the stick of cosmetics material can be applied directly to the face of a user. It is noted that the base unit 2 has laterally-opposed right

and left side walls. Some of the cavities 17a-f are positioned in the right side wall of the base and the remaining cavities in the left side wall of the base, so that the user may store the most-used "sticks" in the side wall of the base 2 which is most readily accessible to the dominant hand of the user which is free when the other hand is holding the phone unit 3 or the base 2. In like manner the base unit 21 has cavities for receiving the cosmetic products 18a-f distributed between the laterally-opposed side walls of the base 21. As in the first embodiment, the user may select the "stick" which she desires to be readily accessible to her dominant free hand when the other hand is holding the phone unit 22 which may or may not be attached to the base unit 21. It should be noted that in both embodiments, two of the cavities in the right wall are identical to the two cavities in the left wall to permit the user to select between the opposite walls for stowage of the accessible "stick".
